ASTRILL VPN · INDEPENDENT GUIDE

Astrill Vpn for Android: setup guide

Phones and tablets running Android.

Before you start

1. An active Astrill account and your login email and password.
2. Uninstall or disconnect any other VPN app on this device.
3. About ten minutes and a working internet connection.

Install

1. On your phone, open https://astrillvpn.app/download and tap Download APK.
2. If it is a direct file rather than a store listing, allow installs from your browser once, then turn that setting off again.
3. Open the app and sign in.

Connect

1. Tap connect and accept the Android connection request. A key icon appears in the status bar.
2. For constant protection: Settings > Network & internet > VPN > gear next to Astrill > Always-on VPN.
3. Set battery usage for the app to unrestricted so it is not closed in the background.

Verify the connection

1. Check your IP address on a lookup site. It should show the VPN server location.
2. Run a DNS leak test. DNS servers should not belong to your home internet provider.
3. Turn on the kill switch or connection guard option if your app offers one.

Get the genuine Astrill Vpn app from our download center: https://astrillvpn.app/download . This guide contains no software. It was written by https://astrillvpn.app, an independent website that is not affiliated with, owned by or endorsed by Astrill. App screens and options can change between versions.
