ASTRILL VPN · INDEPENDENT GUIDE

Astrill Vpn for Mac: setup guide

For Macs with Intel or Apple silicon processors.

Before you start

1. An active Astrill account and your login email and password.
2. Uninstall or disconnect any other VPN app on this device.
3. About ten minutes and a working internet connection.

Install

1. Download the macOS version from https://astrillvpn.app/download.
2. Open the downloaded file and move Astrill to Applications.
3. Launch the app. When macOS asks to add a VPN configuration or allow a network extension, approve it in System Settings (Privacy & Security, or General > Login Items & Extensions).

Connect

1. Sign in with your Astrill account.
2. Choose a nearby server and connect.
3. Optional: enable open at login so you are protected from startup.

Verify the connection

1. Check your IP address on a lookup site. It should show the VPN server location.
2. Run a DNS leak test. DNS servers should not belong to your home internet provider.
3. Turn on the kill switch or connection guard option if your app offers one.

If it does not connect

1. Re-check that the network extension is allowed in System Settings.
2. Quit the app fully (Cmd+Q), reopen and try another protocol.
3. Remove other VPN profiles under System Settings > VPN.

Get the genuine Astrill Vpn app from our download center: https://astrillvpn.app/download . This guide contains no software. It was written by https://astrillvpn.app, an independent website that is not affiliated with, owned by or endorsed by Astrill. App screens and options can change between versions. Free for personal use.
